

INTELLIGENCE PROFILE

Intracom

DOMAIN:	Physical security
CUSTOMER:	Major convention center and events operator managing multiple zones, vendors, and 24/7 guard operations
FRONTLINE:	Security guards, Shift supervisors, Dispatch operators, Command center managers, Venue operations staff
STAGE:	Pilot / design partner deployment

THE CHALLENGE

Security at a large convention center operates on intelligence that never gets structured—it lives in radio traffic during a shift, then disappears. Across 1.8M square feet hosting 1,000+ events annually, dozens of officers communicate constantly over radios: observations about individuals, incidents requiring response, coordination across posts. But managers can't be everywhere to listen. Their situational awareness depends entirely on what gets escalated—the incident reports that make it through, the radio calls they happen to hear. Everything else stays fragmented across channels, invisible to leadership, inaccessible to the guards who need it.

THE SOLUTION

Intracom is a guard force intelligence platform that listens across existing security communications—radio, intercom, SMS, Teams—to build live operational context, then guides guards and managers to act. The platform requires no new hardware, no software installation, no workflow changes—it simply listens to existing communications and returns operational intelligence through channels already in use. Managers see a real-time Activity Desk with complete situational awareness and dispatch Action Agents—prompts, checklists, micro-trainings, BOLOs—directly to guards at the right moment. Intelligence flows bidirectionally: guards become strategic sensors while the system returns guidance exactly when needed. Context persists across shifts, and AI listens first to amplify human judgment with the intelligence needed to execute effectively.

Intracom

IMMEDIATE FIELD VALUE

- Pre-Shift Briefs
- Post-Shift Reports
- Micro-Training
- Micro Drills
- BOLO Distribution
- Communication Visibility
- Continuity Across Shifts
- Pattern Recognition
- Policy in the Moment
- Spatial Intelligence
- Intel Dashboards
- + more

LONG-TERM ENTERPRISE VALUE

Intracom creates a persistent, cross-shift intelligence layer that lets our customer operationalize verbal signals at scale and deploy AI across the organization more effectively than their peers.

HOW IT SCALES

Intracom scales from security to any department using radio communications—parking, maintenance, facilities, event coordination. Beyond this customer, Intracom addresses massive market opportunity: hospitals, municipalities, airports, manufacturing plants, logistics facilities, and government agencies where radio traffic carries mission-critical intelligence that never gets structured. The solution deploys rapidly—connect communications, align policies, start listening. As adoption scales, operational patterns and best practices become shared intelligence across organizations while each maintains complete control over their data.

BUILT ON HUMANTIC

Humantic is Multiplied's AI operating system grounded in Human Intelligence. It aligns AI with how people actually think — visually, verbally, and spatially — and connects systems to the right people when context matters most. On this foundation, Multiplied builds targeted solutions for frontline environments where human expertise is mission-critical.

WHAT WE BELIEVE

$Ai \times Hi > Ai$

AI × Human Intelligence is always greater than AI alone. In the coming decade, “having AI” will be table stakes. Real advantage will belong to organizations that cultivate, connect, and multiply their human intelligence where real work happens.
