

INTELLIGENCE PROFILE

Projectel

DOMAIN: Construction / EPC

CUSTOMER: Global EPC delivering multi-year, critical infrastructure mega projects

FRONTLINE: Builders, foremen, craft professionals, engineers, superintendents— coordinating thousands of people across complex work sequences.

STAGE: Enterprise rollout

THE CHALLENGE

For our customer, billions of dollars and years of schedule depend on intelligence that doesn't live in systems — it lives in people. The real edge in execution is the know-how of frontline builders: how work actually gets done, how sequencing really unfolds, and the judgment earned through decades of experience. Yet projects are becoming faster and more complex while the most experienced workforce is aging out. As they leave, that knowledge walks off-site with them — what works isn't shared, lessons are lost, and every new project relearns the same problems. The intelligence that determines success is eroding precisely when projects need it most.

THE SOLUTION

Projectel is a builder intelligence platform that captures, correlates, and operationalizes tribal knowledge from construction workers and project teams. The platform captures and shares builder know-how through photo, video, and voice — how construction workers naturally communicate — and organizes it so it can be reused across every project. The result is faster and safer execution, fewer mistakes, and builder intelligence that persists beyond the end of each project.

Projectel is currently being rolled out across the enterprise, deployed on mega projects where failure is costly and coordination is complex. It is being used in production by builders and project teams and is positioned to scale across thousands of workers by the end of 2026.

LONG-TERM ENTERPRISE VALUE

Projectel builds a durable, field-grounded corpus of tribal intelligence that becomes the training substrate for a customer-owned AI industrial EPC model for the planning and execution of future mega projects.

HOW IT SCALES

Projectel scales from individual jobsites to the entire enterprise, turning Field Notes into a shared, continuously growing repository of frontline intelligence that travels across projects and business units for 40,000+ workers worldwide. This field-built intelligence becomes the foundation for an industrial model that our customer can own and commercialize. In a \$10+ trillion construction industry that chronically runs over budget and behind schedule because tribal knowledge remains trapped in people's heads, Projectel's rollout with one of the world's largest EPC companies validates both the approach and the market urgency.

BUILT ON HUMANTIC

Humantic is Multiplied's AI operating system grounded in Human Intelligence. It aligns AI with how people actually think — visually, verbally, and spatially — and connects systems to the right people when context matters most. On this foundation, Multiplied builds targeted solutions for frontline environments where human expertise is mission-critical.

WHAT WE BELIEVE

$Ai \times Hi > Ai$

AI × Human Intelligence is always greater than AI alone. In the coming decade, "having AI" will be table stakes. Real advantage will belong to organizations that cultivate, connect, and multiply their human intelligence where real work happens.
