

Procede

DOMAIN:	Energy operations / HSE & procedural compliance
CUSTOMER:	Large Appalachia natural gas exploration and production company operating multi-asset field operations
FRONTLINE:	Field operators, site supervisors, HSE professionals, maintenance technicians, contractors and craft crews
STAGE:	Deployed and in production

THE CHALLENGE

A major U.S. natural gas exploration and production company operating in the Appalachian Basin faced increasing complexity across safety-critical procedural workflows. Frequent operational changes, contractor coordination, and regulatory oversight placed heavy strain on Management of Change, Permit to Work, PSSR, NCR handling, and audit preparation. Existing systems were document-heavy, reactive, and disconnected from real field conditions. Field teams struggled with clarity, while leadership lacked real-time visibility into procedural risk and compliance health. Audit preparation was time-consuming and retrospective, and tribal knowledge remained largely undocumented, increasing operational risk and inconsistency across sites.

THE SOLUTION

Procede was deployed as a mission-critical procedural intelligence platform used daily by more than 500 field professionals across active operations. The platform digitizes, automates, and enables core compliance workflows while integrating directly into field execution. Procede ingests real-time signals through mobile and other communication channels and us AI to identify changes, risks, and deviations as work progresses. It dynamically generates procedural artifacts, links workflows across MOC, PTW, PSSR, NCR, and audit readiness, and preserves full traceability. Experts are kept in the loop to validate outputs and continuously improve procedural quality.

Procede

IMMEDIATE FIELD VALUE

- Daily use by 500+ field pros
- Improved contractor coordination
- Faster MOC creation + review
- Mobile-first field adoption
- Reduced permit prep time
- Faster NCR identification + routing
- Clearer hazard visibility
- Reduced documentation burden
- Fewer procedural ambiguities
- Higher confidence in safe work
- Real-time deviation detection
- +

LONG-TERM ENTERPRISE VALUE

Procede converts real-time procedural signals and expert feedback into a governed, reusable knowledge base that enables our customer to train and continuously improve an AI industrial model for safe operations.

HOW IT SCALES

Procede scales across assets, sites, and work types while maintaining enterprise-grade reliability and governance. Its modular design allows new procedures, regulatory regimes, and operational domains to be added without disrupting active workflows. As usage expands, agentic AI benefits from increased signal volume and expert feedback, enabling cross-site learning and standardization. Procede can extend beyond HSE into broader operational and compliance domains while remaining audit-ready and mission-critical.

BUILT ON HUMANTIC

Humantic is Multiplied's AI operating system grounded in Human Intelligence. It aligns AI with how people actually think — visually, verbally, and spatially — and connects systems to the right people when context matters most. On this foundation, Multiplied builds targeted solutions for frontline environments where human expertise is mission-critical.

WHAT WE BELIEVE

$Ai \times Hi > Ai$

AI × Human Intelligence is always greater than AI alone. In the coming decade, “having AI” will be table stakes. Real advantage will belong to organizations that cultivate, connect, and multiply their human intelligence where real work happens.
